Bellow Service Kit 755257

Note: The recommended tool to use for this replacement kit would be earl clamp pliers. These can be purchased at your local hardware store or sourced online.

Step 1:

Remove the clamps securing your damaged bellow. This is accomplished by anchoring the crimping tool around the crimped portion of the clamp, and then lift up the clasp portions of the clamp.

Step 2:

Slide the new bellow onto the fully extended cylinder rod.

Step 3:

Crimp the clamps on both sides of the bellow.
